The Machinery

The Machinery
of the Body
(By DR. I. W. SHORT.)

The body is a highly organized machine of complicated parts in which the liver and the kidneys work for the common good. Damage to either one of these organs interferes with man as a motor mechanism. The automobile expert knows how important it is that the carburetor does not get too much fuel, along with sufficient air to burn or explode the gas. Too much fuel in man's machine, such as eating too much meat, or alcohol or tea, and the liver cannot "turn over," nervous overwork and lack of exercise in outdoor air bring constipation and bad health. Eat less meat, plenty of vegetables, and with air and good exercise von need little elas.

Most people die eventually of an overacied condition. If the blood can be rendered more alkaline, the longer we live. With regular hours, plenty of water between meals, sensible coarse food and a chance to get the poisons out of the system, a man will live to be a hundred.
